

A STANDARDIZED MOBILE PLATFORM FOR ISRU ACTIVITIES ON THE MOON

Lennart Fox¹, Maximilian von Unwerth¹, Irene Selvanathan¹, Heiko Wickboldt¹ and Simon Stapperfend²

¹: NEUROSPACE GmbH – lennart@neurospace.de | ²: Technische Universität Berlin – s.stapperfend@tu-berlin.de

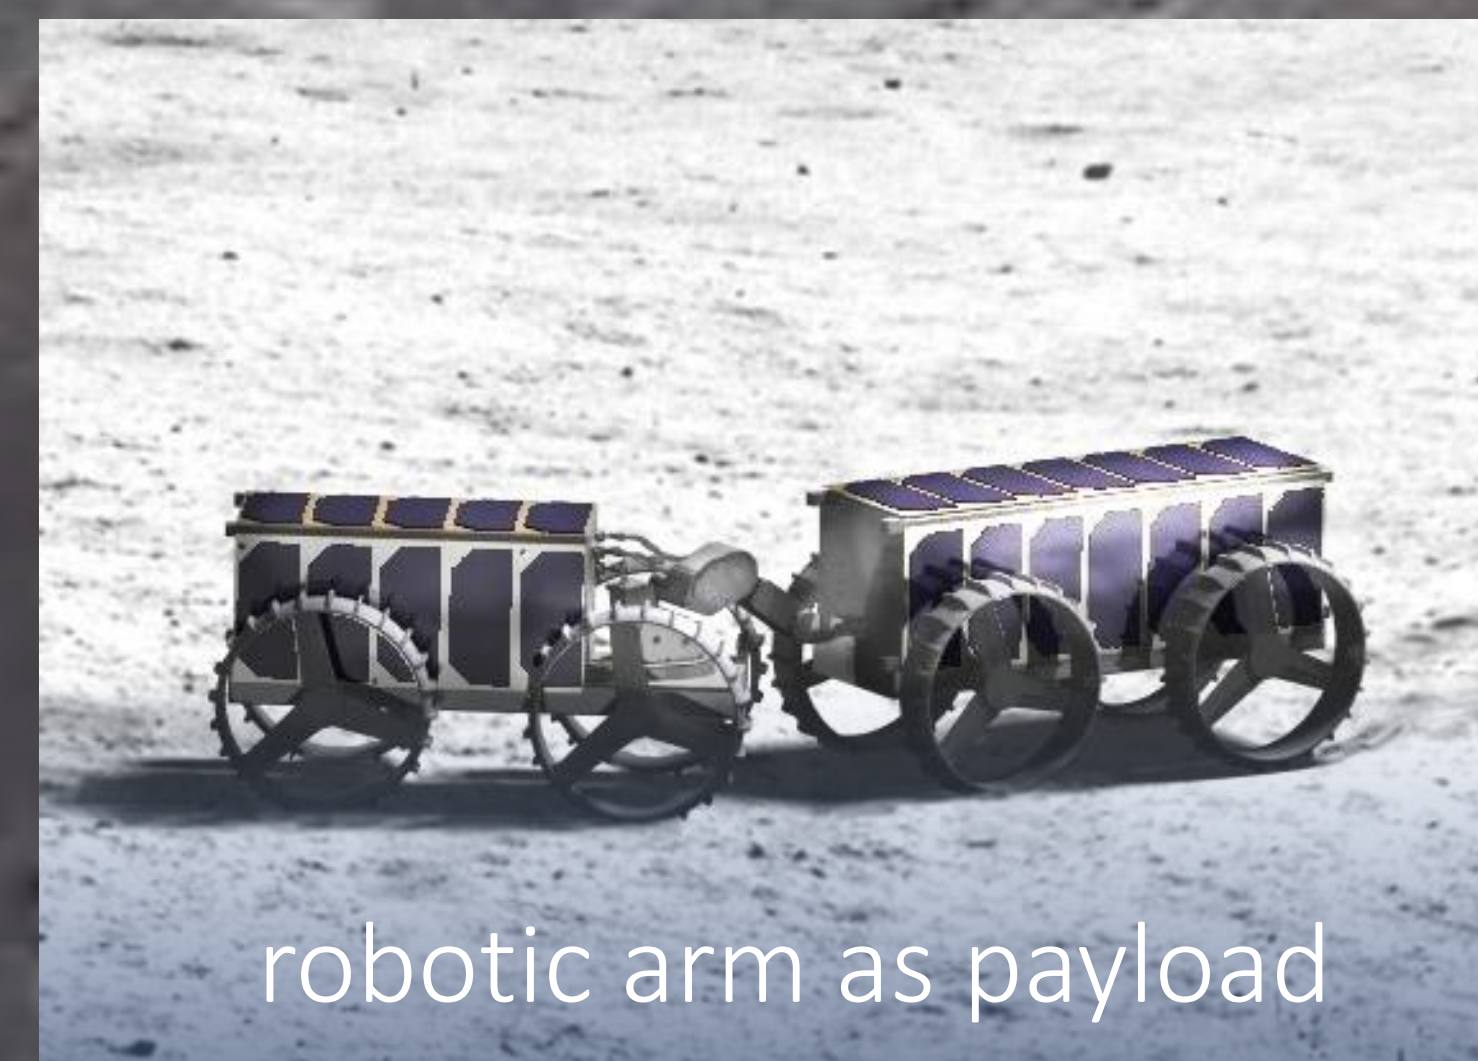

controlled via internet

tested on regolith simulant

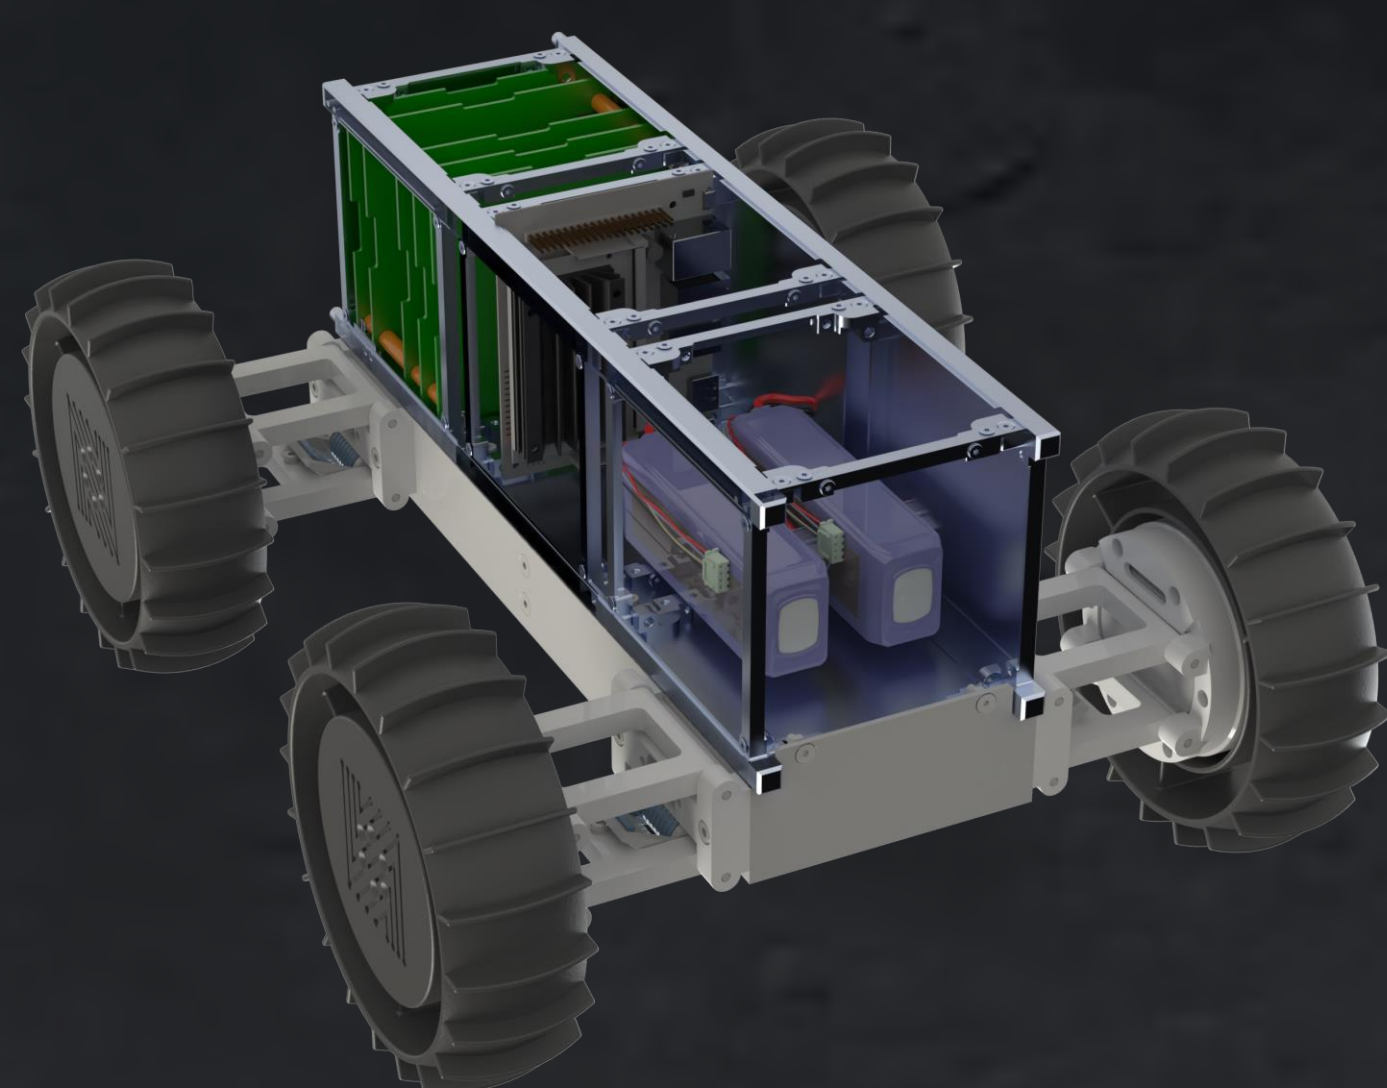

climbs up to 30° on regolith

robotic arm as payload

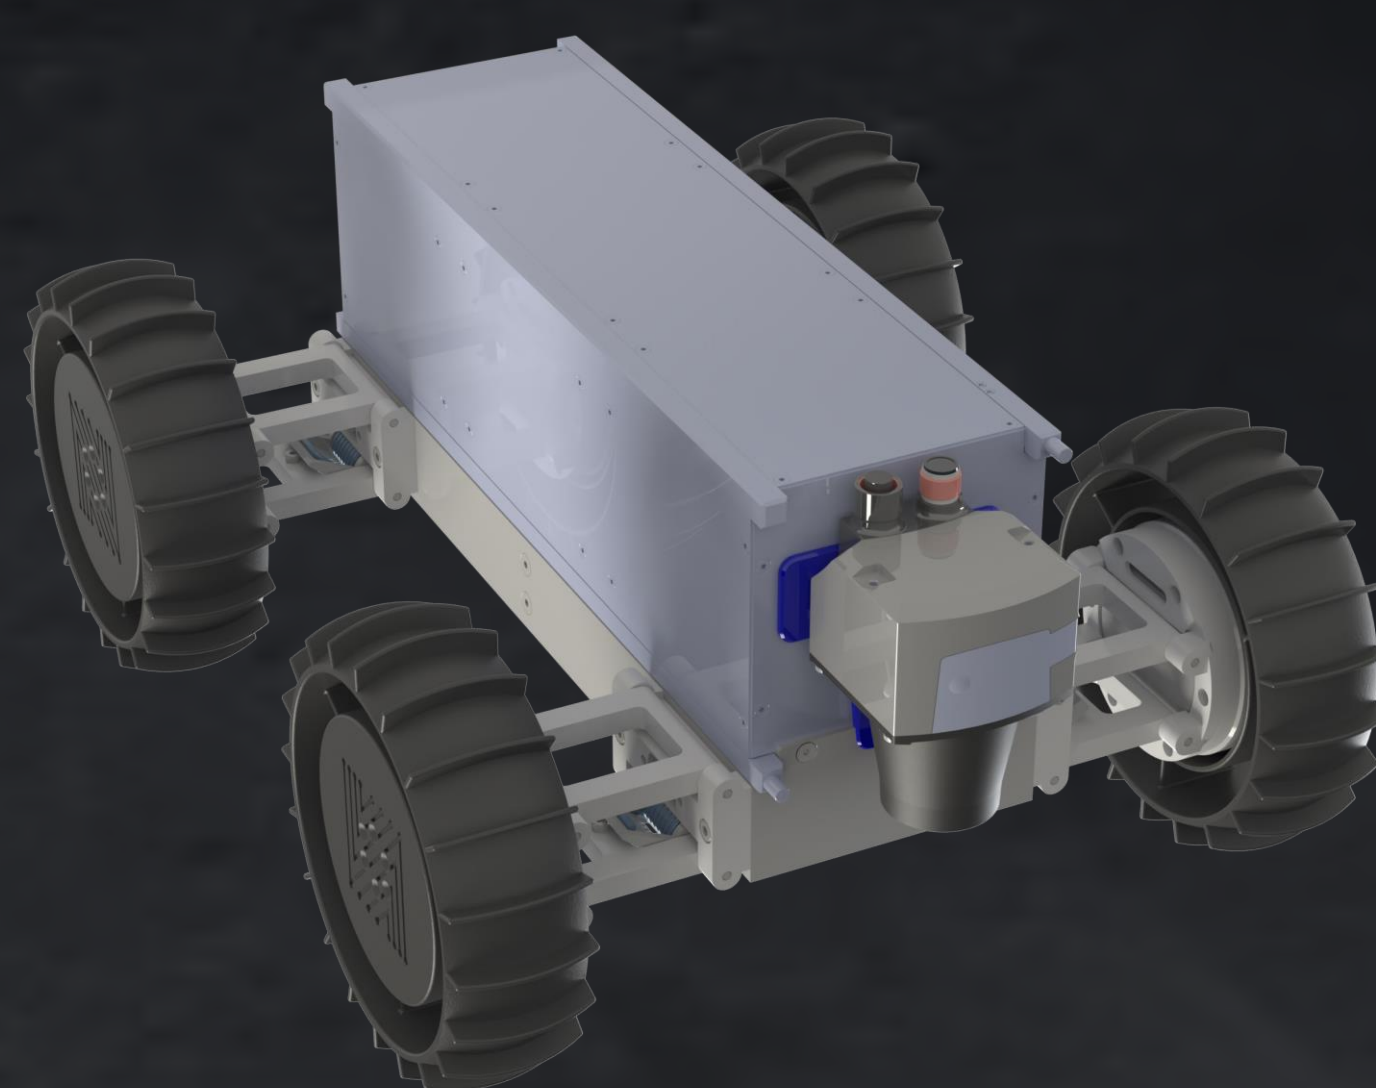

HiveR - A TIERED SOLUTION FOR EARTH AND BEYOND

Tier 1: Academics

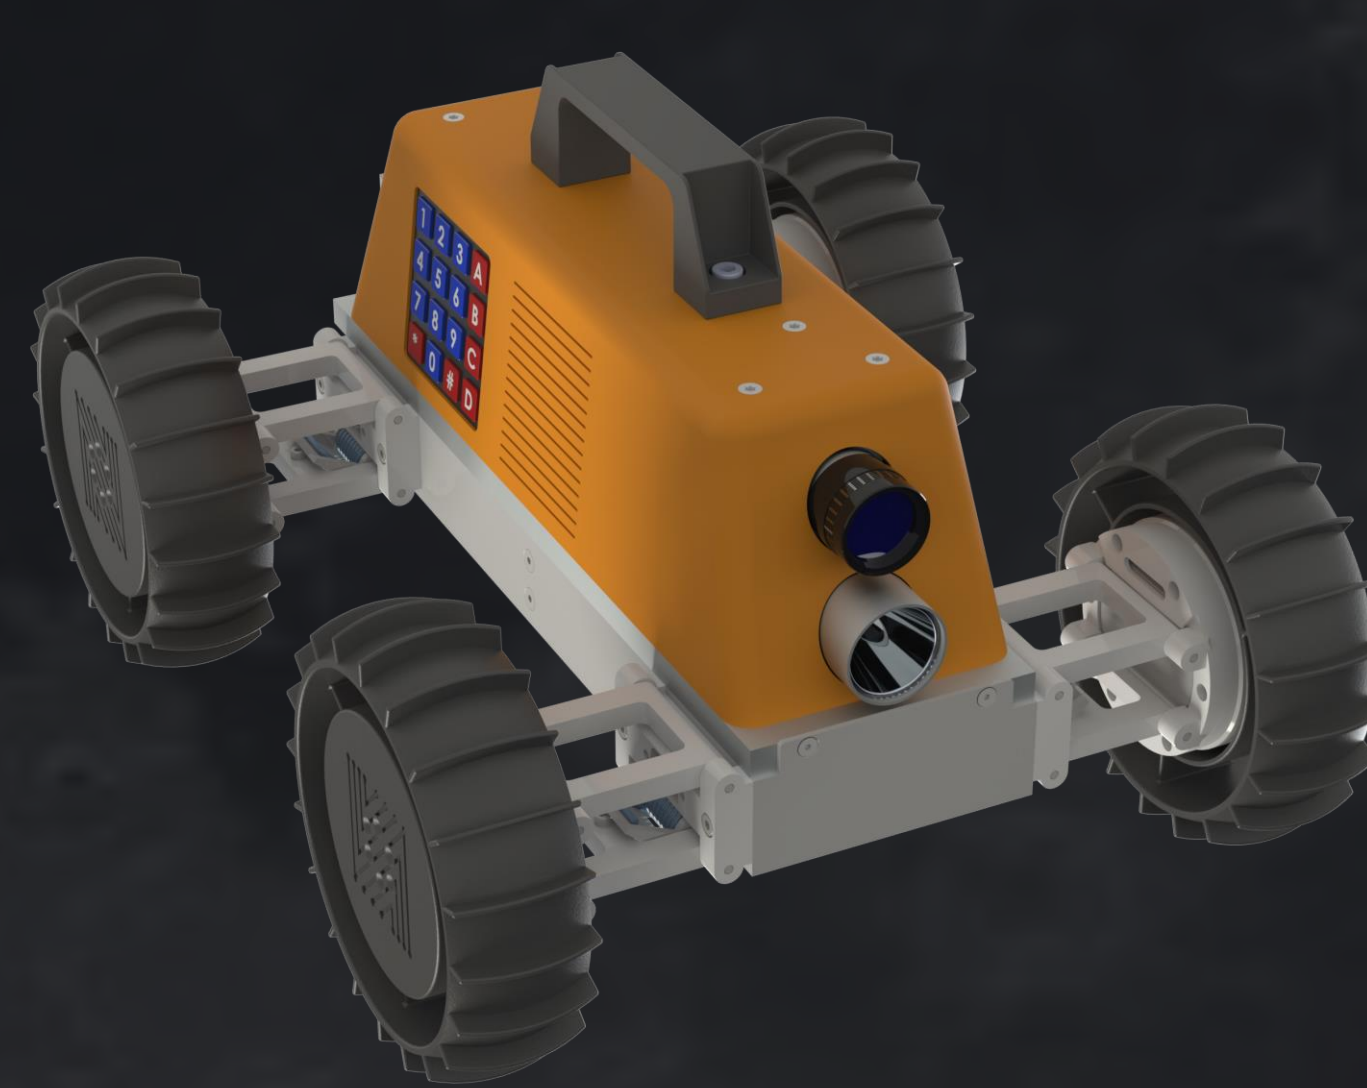

Ideal for hands-on education and laboratory research, allowing for algorithm development and experimentation.

Tier 2: Industry

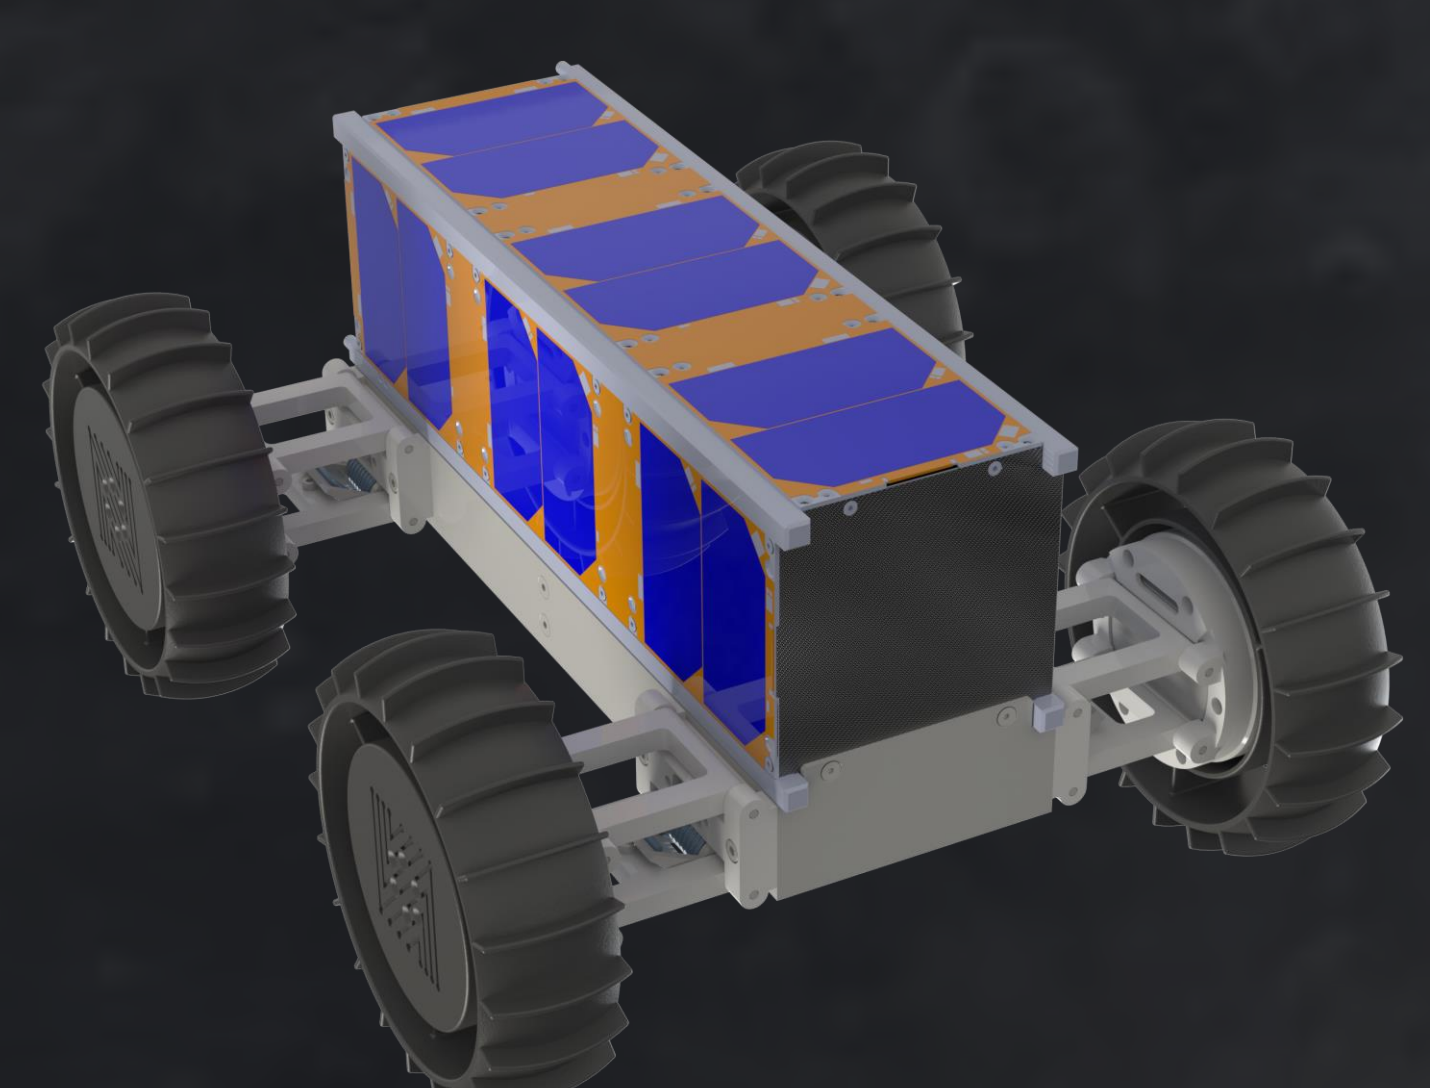

Designed for industrial applications such as automated factory inspection, mining site exploration and robotics research.

Tier 3: Hazmat

Helping emergency relief crews with responses that require the control, containment and removal of hazardous materials.

Tier 4: Space

Geared towards space exploration and capable of operating in the harsh conditions of the lunar surface.
